

FOR IMMEDIATE RELEASE

Precision Foam Fabricators (PFF) Triples Production Capability With Purchase of Second Continuous Panel Laminating System

SOCIAL CIRCLE, GA – Precision Foam Fabricators (PFF) has purchased a new, state-of-the-art continuous line panel laminating system from Bradbury Group Australia (BGA) to meet high customer demand.

The new equipment will arrive in Social Circle, Ga. by the second quarter of 2012 and more than triple the current production capabilities. It will run in parallel operation with the existing continuous line panel laminating system purchased from BGA in 1988.

Dan Garner, plant manager for PFF, states, “We are excited to offer this benefit to our customers. The innovative spray glue system on our new continuous panel laminating system will greatly increase production speed and continue to guarantee that each panel is produced to meet rigid appearance and performance standards.”

Since 1969, PFF has manufactured Structural Insulated Panels (SIPs) for general contractors and business owners who need a construction material that is lightweight, thermally efficient, and allows for very fast construction. PFF manufactures SIPs for walls, floors, roofs and ceilings for various applications including cold storage facilities, food processing, cleanrooms, single family residents, condominiums, schools, HVAC duct systems, privacy fencing, strip malls, and commercial buildings.
